

MicroTag Technologies - New Laser Etching Technology

MicroTag Technologies, a provider of the new Laser Marking Technology (LMT), is

offering a unique Reward and Recovery mechanism for portable electronic devices.

Founded in 2002, MicroTAG has established itself as one of the leading LMT suppliers to both the home and commercial sectors.

Using state-of-the-art laser marking and cutting applications, MicroTag has been able to develop one of the most practical and efficient LMT applications in the UK capable of adding a security mark to just about any piece of IT equipment.

Laser marks, such as logos, bar-codes or other unique identifying marks can be added to portable assets such as personal computers, Blackberries, pocket PC's, mobile phones and laptops, as well as fixed assets that are already located in situ, such as file servers, printers, photocopiers and televisions.

Removal is virtually impossible without dramatically reducing the value of the marked item.

A unique Finders Reward Scheme can also be added to encourage people to return found property. The reward element is fully insured with a Financial Services Authority approved insurer, and all data is held on an International Security Register.

One customer, Department for Business, Enterprise and Regulatory Reform (B.E.R.R. formerly the DTI) which implemented the system only last year has already seen a significant return on investment having 12 portable devices returned in the first 12 months under the reward scheme.

If you are concerned about the loss of portable devices in your organisation and are interested in seeing how MicroTag could assist you in improving security of attractive assets why not give Mark Richards a call on 01745 585725 - mobile 07894 985970 or email mark.richards@micro-tag.com.

With the increased public concern of sensitive data held upon portable mobile devices at this time, MicroTag Technologies invite you to contact for a free on-site consultation and quotation.
